(a) Reconstruction from published parameters
ε/A
quasimomentum k
ϕ = +π/2: cos k − 0.40 sin 2k
time reverse: cos k + 0.40 sin 2k
inactive long-range channel
(b) Uniform-quasimomentum pushforward
DOS
normalized quasienergy x/A
active gauge domain
cosine/arcsine reference
(c) Ternary-domain predictions (not experimental fits)
ensemble DOS
normalized quasienergy x/A
q = 1.00
q = 0.75
q = 0.50
(d) Testable singularity-topology transition
critical quasienergy
long-range ratio α = |V2/V1|
Dutt et al.: 0.40
cubic threshold: 0.50
